# MEGA-TREND WHITE

Whether simple, straight or classically playful – white doors are absolutely in vogue and harmonise perfectly with all modern home interior styles.

Choose your personal favourite from a harmonious spectrum of light colours, from pure whites to elegant beiges. Set a natural accent with light wood colours or emphasise the functionally modern character of your door with arctic white or classic white.

PortaLit® door LAE 246 (larch white)

# SEEING AND FEELING

All of our PortaLit® plastic doors are resistant to wear. For decades, this high-pressure surface finish has proved itself time and again under extreme conditions.

And it will continue to do so, only from now on it will be even more pleasant to the touch. The popular soft touch and classic touch surface finishes will now be joined by the velvety feel of nature touch.

Find out for yourself – PortaLit® doors not only look good, they also feel good and are easy to clean.

Welcome to our product world!

You will find detailed information on PortaLit® finishes on page 62 et seq.

**Completely natural:**  
Our plastic-coated doors with high-pressure surface coating

**PortaLit®**

## soft touch

A surface with a matt gloss, soft as silk yet extremely wear-resistant.  
Dust simply slides away.

## classic touch

A classic for single-colour doors for many years. Feels like precious parchment, extremely hard-wearing and yet functional and lively.

## classic touch

The classic finish for a tried and tested wood grained look. The fine grain emphasises its wood character and makes an especially authentic impression. Extremely wear-resistant like all PortaLit® finishes.

## nature touch

Our new finish feels as natural as freshly sanded and waxed wood. Easy to grip and woody, with a guaranteed 'well being effect'.

## **INSIGHTS – OUTLOOKS | DOORS WITH GLAZING**

Our translucent interior doors offer surprising, new insights and outlooks. The striking designs refine the interior of any room and make dark rooms wonderfully bright and cosy. These charming eye-catchers will transform your living space into a light-flooded oasis where you can relax and escape from your everyday routine.

## GLAZING | RECTANGULAR AND ROUND

Vision panel door LA-3 in Portalit® A-223 (classic white), Satinato glazing

With their plain elegance and straight lines, these interior doors feature impressive rectangular vision panels with a modern feeling. Set individual accents and choose between simple clear or attractive textured glass.

## SIMPLY UNIQUE | DESIGN DOORS

Do you need doors that reflect your own unique, modern style? Are you looking for doors that say something special? Our design doors offer the perfect solution with a series of designs whose contemporary style is impressively elegant and individual. Be seduced by the variety of designs and transform your rooms with these exquisite models.

## ANTEA | DESIGN DOORS WITH SIMPLE FRAMES

The 'Antea' door is plain, straight and functional. Its filigree frame evokes classical doors.

Its charm lies in just this combination, which is why the 'Antea' door adds a harmonious touch to living spaces inspired by Scandinavia or Asia – or to a traditional, classical ambiance.

| Type 8101D |

#### Finish options

WestaLack® classic white (RAL 9010) and arctic white (RAL 9016) and the agate (RAL 7015), ferrum (RAL 7047), cement (RAL 7004) and macchiato (RAL Design 060 60 05) trend finishes, see page 61

## VARIO | DESIGN ELEMENT WITH INTERESTING ACCENTS

Vario door-set in WestaLack® classic white (RAL 9010), frame decor TN 543 apple green,  
special version without keyhole

**Door leaf cores**  
hollow chipboard,  
solid chipboard

**Door edge designs**  
see page 67

'Vario' means variable, convertible and flexible. This design element will turn your simple door into a real eye-catcher. Would you like to bring your door to life in colours that match your own decorating style? With our 'Vario' design element, you'll set new accents in the living space of your dreams.

Frame insert on top in WestaLack classic white. Also available in the following decors: apple green (TN 543), cement (A 446), cherry red (A 609) and agate (A 411), see figure on the right

Frame insert on top in walnut noce (NU 736). Also available in the decors light pine (Pi 11) and oak italia (EiP 356), see figure on the right

Frame look on both sides. Groove insert colour is to one side only (pull side – as per large photo). Door leaf and beadings are also available in trend lacquering.

You will find all the colours and models in this series at [www.westa-tueren-konfigurator.de](http://www.westa-tueren-konfigurator.de)

**Rebate options**  
rebated

#### Finish options

WestaLack® classic white (RAL 9010) and arctic white (RAL 9016) and also available in the trend finishes agate (RAL 7015), ferrum (RAL 7047), cement (RAL 7004) and macchiato (RAL Design 060 60 05), see page 61

## PLANO | DESIGN ELEMENTS WITH RESTRAINED ELEGANCE

Plano door-set in WestaLack® classic white (RAL 9010), special version without keyhole

**Door leaf core options**  
hollow chipboard, solid  
chipboard

**Door edge designs**  
see page 67

With this design element, you'll cast magical shadows on cool walls. Above the door, a slightly broader architrave gives the element a modern look and restrained elegance. As it tapers towards the wall, the design element's timeless look is completely convincing.

The broad frame crosspiece contributes to an interesting overall visual effect. Fine shadow joints enhance the element with elegant structures.

In line with the simple elegance of this door-set, we recommend using a door leaf without a keyhole.

Also available as inlay door in models 2100, 2201, 2202 and 2203, see page 16 et seq.  
Frame look on both sides.

**Rebate options**  
flush closing

**Finish options**  
WestaLack® classic white (RAL 9010),  
see page 61

## STYLE | DESIGN DOORS WITH A 3D SURFACE

Are you ready for unexpected sensory experiences? Touching our unique, high-quality 'Style' door surfaces will be a new experience for you. Lively, softly emerging patterns transform these doors into extravagant fixtures that can be perfectly integrated into your living space.

## COSINESS WITH STYLE | COUNTRY HOUSE DOORS

Do you long for pure relaxation and an escape from the stress of everyday life? Thanks to the combination of traditional shapes and classical styles, our Country House doors turn every room into a cosy, relaxing environment. The various models fill rooms with warmth and create a friendly atmosphere. A perfect combination for your wellbeing.

## PROVENCE | ALL COLOURS AT A GLANCE

Provence door type 4004-2LA in WestaLack® trend finish ferrum (RAL 7047) with clear glazing

We are versatile! The new colours of our classical 'Provence' door series are in line with the trend to muted tones and are an outstanding match for today's interiors. Harmonious contrasts create satisfying transitions, giving rooms a soft, welcoming touch.

# DOORS WITH HPS (HIGH PRESSURE SURFACE) FINISHES

PortaLit®

These doors are exposed to particularly high pressure during manufacturing to create a special high-pressure surface (HPS). The resulting pore-free layer is not only scratch and abrasion resistant, but also highly insensitive to dirt. This is why our PortaLit® doors, which are available with perfect wood reproduction surfaces or brilliant solid colour decors, are particularly wear-resistant.

Young families are not the only ones who benefit from the useful properties of this versatile door. This classical door is successfully used in medical practices, hotels and schools.

## THE WORLD OF LIGHT DECOR

Timeless and classically white.

Brilliant colours in rooms are best highlighted by light coloured doors. Choose your favourite decor from this range of tones and shades. Cool and elegant arctic white underlines a clear style in interior design, while classic white and white wood are friendly and welcoming.

RAL/NCS specifications are approximations of the colour systems and may deviate depending on the surface finish.

The basic decors of the PortaLit® finish are stylish classics for contemporary living.

The trend decors of the PortaLit® finish are ideal for modern interior designs.

## WARM WOOD

These doors are genuine jewels – and not only for nature lovers. The bright, gentle wood adapts perfectly to every situation your classical living style requires, creating a very cosy atmosphere.

## DARK WOOD

Dark wood has an unusual, elegant look. In a modern living environment, these doors set special accents and clearly underline your individual decoration style.

The basic PortaLit® finish decors are classics with an assured sense of style for contemporary living.

The PortaLit® finish trend decors are ideal for modern interior designs.

## DOORS WITH DECOR FILM FINISHES

DekoRit®

The classical, versatile DekoRit® range makes an ideal first introduction to design doors. Available in numerous fashionable decors, the easy-care surface is easy to clean with a damp cloth. The wood reproductions have a look that is true to the natural original.

The perfect solution for price-conscious interior designers.

# QUALITY DOORS BY WESTAG

## Made in Germany

Westag & Getalit can look back on more than 100 years of company history. We are one of the leading manufacturers of derived timber and plastic products. In the course of the past decades, we have become familiar with our customers' needs and enjoy satisfying them.

Doors by Westag make your rooms perfect with respect to look and function. Choose among our wide range of products. Their design and mechanical properties will impress you. Modern or traditional, which type will you choose? In every case, you will obtain a top quality product made in Germany. Perfect doors for enjoyable interiors. Today and for the future.

### ENVIRONMENTALLY FRIENDLY PRODUCTION

Westag & Getalit AG is the first manufacturer entitled to bear the 'Blue Angel' ecology label on their range of doors and door frames. This creates transparency for the company. Consumers are assured that our doors and frames are high quality and environmentally friendly.

The Blue Angel takes the entire product life cycle into account. It promotes the use of wood from sustainable forestry and low-emission wood-based products. RAL GmbH certifies manufacturers according to the 'RAL-UZ 38' basic award criteria for low-emission wood and wood-based products. You will find further information at [www.westag-getalit.de](http://www.westag-getalit.de).

### ISO 9001 CERTIFICATION

Our company complies with rigorous management standards (DIN EN ISO 9001:2008). Adherence to this philosophy without compromises and seamless supervision of all products are a focus of our daily activities. Our corporate quality goals are not only supported by our in-house laboratory but also through the expertise of independent external auditors and the implementation of the stringent control measures imposed during their audits.

The RAL quality mark for interior doors is further evidence of the success of these efforts.

### FSC AND PEFC DERTIFICATION

Environmental friendliness is not just a passing fad – to us, it's a matter of course. By providing FSC® and PEFC™ certification for our products, we stand for sustainable, ecology-orientated thinking in our daily operations. Our products comply with the current requirements of public tenders.

## DOOR STRUCTURES

### Door edge options

#### RECTANGULAR EDGE

Available in all finishes.

#### POSTFORMING ROUND EDGE RK-PS(narrow)

Available for PortaLit® decors in the soft touch and nature touch surface finishes.

#### POSTFORMING ROUND EDGE RK-P

Available for PortaLit® decors in the soft touch and classic touch surface finishes and for decors in the DekoRit® surface finish.

#### INLAID ROUND EDGE RK-E

Available in the WestaLife® (genuine wood veneer) surface finish.

#### SEGMENTAL ARCH EDGE RK-S

Available in the WestaLack® surface finish (white lacquer and trend lacquers).

### Door leaf cores

#### SPECIAL HONEYCOMB CORE

For interior doors with low requirements for price-conscious builders.

#### TUBULAR CHIP WEB CORE

The ideal compromise between special honeycomb and hollow chipboard core (available with PortaLit® finish).

#### HOLLOW CHIPBOARD CORE

For solid building construction and the quality-conscious builder. Our recommendation for interior doors.

#### SOLID CHIPBOARD CORE

For doors exposed to high wear and flat entrance doors complying with noise protection requirements in combination with a floor seal.

# DOORFRAMES

## Wooden wrap-around frames

Wooden wrap-around frames offer a highly versatile range of applications and satisfy the most discerning requirements.

They are available for all standard wall thicknesses with architraves widths of up to 100 mm. You can choose among a variety of versions in any style from modern to classical. The flush closing versions are in line with the trend to integrating the door and the frame to fuse elegantly at the surface.

**Rebated**

**Flush-closing**

### STANDARD WOODEN FRAME WITH ROUNDED EDGES

Suitable for all door leaves with rectangular or round edges. The frame is also available with architrave widths of 65, 75, 80, 90 and 100 mm as a special option. Available in all finishes.

### WOODEN FRAME WITH RECTANGULAR EDGES

Suitable for all door leaves with rectangular edges. The frame is also available with architrave widths of 65, 75, 80, 90 and 100 mm as a special option. Available in the WestaLife® finish.

Our recommendation for flush closing door leaves with rectangular edges.

### PROFILED WOODEN FRAME P1

The profiled architrave goes well with our 'Provence' Country House doors. Available for the WestaLack® classic white (RAL 9010) surface finish.

### CROWNED WOODEN FRAME P2

Modern look with an appealing rounded architrave. Available in the PortaLit® A 223 (classic white), AH 74 (rustic maple), BU 88 (flowery beech) and WestaLack® classic white (RAL 9010) surface finishes.

## Frame dimension determination for wooden wrap-around frames

The table below will help you to determine the correct ordering size for your frame.

Rebated								
Size to order (mm)	65 <sup>1)</sup>	70	80	100	125	145	165	185
Adjustment range: from	65	70	80	100	121	141	161	181
to	75	80	90	116	141	161	181	201
Size to order (mm)	205	225	240	270	290	310	330 <sup>3)</sup>	
Adjustment range: from		201	221	236	266	286	306	326
to		221	241	256	286	306	326	346

Flush-closing								
Size to order (mm)	80 <sup>2)</sup>	100 <sup>2)</sup>	125	145	165	185		
Adjustment range: from		80	100	121	141	161	181	
to		90	116	141	161	181	201	
Size to order (mm)	205	225	240	270	290	310	330 <sup>3)</sup>	
Adjustment range: from		201	221	236	266	286	306	326
to		221	241	256	286	306	326	346

<sup>1)</sup> Min. wall thickness WestaLife® 70 mm

<sup>2)</sup> Min. wall thickness 80 mm (rounded jamb plate/rounded architrave) or 100 mm (other designs)

<sup>3)</sup> Available wall thickness up to 620 mm

## Special frames

Block frames have a completely different look and are popular among architects as well.

Depending on the structure and installation in the wall opening, a difference is made between edge frames and butt frames:

### EDGE FRAMES

Suitable for door openings where the clear passage should only be reduced slightly and for low wall thicknesses (not in combination with draught excluders).

### BUTT FRAMES

Used in walls without brickwork abutment; also available in conjunction with draught excluder. In this case, special door sizes are required for standard wall openings.

# SLIDING DOOR SYSTEMS

## Range of applications for sliding door systems

Sliding doors are a space-saving alternative in places where a standard door (hinged door) cannot be used. Sliding doors that run in front of the wall can be installed in retrospect without any problems. Sliding doors that run inside the wall require a two-shell wall structure (minimum spacing 50 mm, minimum wall thickness 165 mm). These doors disappear completely inside the wall when they are opened. The 'ready-made cabinet' version is suitable for the commercially available prefabricated cabinet systems of various manufacturers.

### Sliding door systems running in front of the wall

Sliding doors running in front of the wall are screwed directly to the wall or can be combined with a standard passageway frame. They are equipped on both sides with circular shell handles.

If the sliding door must be lockable or are intended for a bathroom, the version with circular deadlock and posts must be used.

Sliding doors running in front of the wall can also be assembled subsequently on an existing frame.

# FUNCTIONAL DOORS

## What does 'burglar-resistant door' actually mean?

Doors of the 'Provence' series, other Design and Country House doors and various decors are optionally available with profiles, coatings or lacquers on both or only one side of the door.

This is particularly suitable for use in multi-storey blocks where the doors in the common staircase should all look the same.

When choosing an apartment entrance door, particular attention should be paid to burglar resistance. Why? Because a burglary is committed somewhere in Germany every two minutes.

Westag & Getalit doors give you security. Our door-sets are available in various resistance classes. They are tested according to DIN and EU standards and have test certificates and the corresponding markings. We recommend the optionally available three-point locking system and an additional hinge side protection to protect the door from being levered open. An additional spyhole allows you to take a look at every caller before opening the door.

It's better to be safe than sorry!

## Fitting a burglar-resistant door-set

- 1.** Three-point locking  
(Three locking points, highest level of security)
- 2.** Lowerable floor seal  
reduces draught and keeps noise out reliably
- 3.** Floor seal with (left) opened and (right) closed door for soundproofing
- 4.** Three-part special hinge, for higher tear-out resistance
- 5.** Spyhole

## Recommendations for use acc. to resistance class as per DIN EN V 1627-30 and EN 1627-30

We recommend doors with resistance class 2. These types offer you solid protection against intrusion and burglary.

Burglar/intrusion profile	Security requirements	WK <sup>1)</sup>	RC <sup>2)</sup>
Casual burglar using simple lever tools	Standard security level for apartment entrance exposed to an average risk	2	2
Casual burglar using heavy lever tools	Increased security level for apartment entrance exposed to a high risk	3	3

<sup>1)</sup>Widerstandsklasse <sup>2)</sup>Resistance Class

## Soundproofing

Noise makes you ill. Everyone has known this for a long time and we think that it is a good reason to optimize soundproofing in everyday life. WESTAG & GETALIT's apartment entrance door programme meets all soundproofing and security requirements of DIN 4109, so not only the noise is kept out.

Soundproofing class	Laboratory test result	Recommendation for use
SK27	32 dB	Standard apartment entrance door (minimal requirement acc. to DIN 4109)
SK32	37 dB	Apartment entrance door with more convenience
SK37	42 dB	Apartment entrance door leading directly into the living area, without vestibule (recommended for increased soundproofing as per DIN 4109, Supplement 2)

Our tip: The installation of soundproofing doors not only makes sense for commercial or industrial buildings. Installing a soundproof door for the children's room can be of great service.

## Fire protection/Smoke protection

Our fire-rated doors adapt perfectly to your living situation. To look at them, you can hardly distinguish them from non-rated interior doors. In addition to fire-rated doors, we also offer combined versions for additional smoke protection requirements and pure smoke protection doors.

Door structure	Function
Fire-rated doors (in acc. with DIN 4102 and DIN EN 1634)	Protection against fire for 30, 60 or 90 minutes.
Smoke protection doors (in acc. with DIN 18095 and DIN EN 1634)	Prevention of penetration by smoke that contains toxic gases and impairs vision

Fire/smoke protection doors establish functional and harmonious transitions from the living space to the garage or the boiler room.

## Humid areas/Wet areas

Whether in combination with a stainless steel frame or a humid area frame, this door-set is always the appropriate solution. Its special framing structure and core prevent the absorption of humidity and moisture. The RAL GZ 426 quality mark, according to which our doors have been tested, is evidence of this. An additional benefit is the fact that these doors look like standard doors.

Installation of these doors in high-humidity rooms, such as bathrooms without windows or rooms with saunas, can be practical.

Door structure	Definition acc. to RAL GZ 426/3
Humid area doors	Occasional action of water with drying periods, caused by splash water during daily cleaning or by condensation of water on the surface during longer showering.
Wet area doors	For long-term moisture with drying periods and frequent water-splashing

All of the functions described on this double page can be freely combined in any door-set.

# DIMENSIONS

## We cannot dispense completely with technical knowledge!

Independent of the DIN dimensions specified in the table on the right, we can manufacture doors in almost every size up to 2485 x 1290 mm.

For most Design and Country House doors, sizes up to 2110 x 985 mm are available. With doors with non-standard sizes, the profiles are kept constant and the lateral surfaces are matched to the required size.

ABS, ASR, ESP: It is almost impossible to buy a car today without a basic understanding of modern technical features. Fortunately, this is much easier when buying doors. Nevertheless, the knowledge of some technical terms is required as well. On the following pages, we try to make difficult things as simple as possible for you. We will help you to find and order the right new door.

On the following pages, we try to make things as simple as possible for you.

### DIN dimensions for doors and frames

Door leaf size (rebated)	Door leaf size (flush closing)	Minimum wall opening	Recommended wall opening
<b>Width in mm (of wooden frames)</b>			
610	584	635	650
735	709	760	775
<b>860</b>	834	885	900
985	959	1010	1025
1110	1084	1135	1150
1235	1209	1260	1275
<b>Height in mm (of wooden frames)</b>			
<b>1985</b>	1972	2005	2010
2110	2097	2130	2135

### Important technical terms for door dimensions

## Closing directions according to DIN

**DIN direction left**

The hinges are on the left-hand side when the door is closed.

**DIN direction right**

The hinges are on the right-hand side when the door is closed.

## Climate classes and duty groups

When selecting your door or frame you should pay particular attention to the climate class and duty group. Doors from Westag & Getalit bear the RAL quality mark, which certifies that a product has been manufactured in compliance with high, standardized quality criteria. The recommendations for use in accordance with RAL GZ 426 keep you on the safe side when realizing your construction project.

	I Low	II Medium	III High	N Normal	M Medium	S High	E Extreme
	Honey-comb Tubular chip web Hollow chipbd.	Solid chipbd.	Solid chipbd.	Honey-comb Tubular chip web Hollow chipbd.	Tubular chip web Hollow chipbd. Solid chipbd.	Solid chipbd.	Solid chipbd. <sup>1)</sup>
Place of use	Door leaf climate class			Door leaf duty group			
Interior doors leading to the living room, study, bedroom	■			■
